Introduction

Clark is a registered architect in the state of Florida with 9 years of extensive architect experience and training as a project architect in the thriving and expanding architects field.

He has had diverse and extensive experience in both residential architecture and commercial architecture projects for new and renovated architectonic buildings. These include amongst others single and multifamily dwellings; industrial architect projects like laundry marts and warehouses; retail stores; and buildings such as offices, TV stations, schools, medical and municipal facilities. From these diverse exposures to different architect projects, The architect have enhanced his architectural capabilities in developing architects construction documents or preliminary/conceptual architect drawings. These architects drawings include architects plans and notes taking into consideration all the fundamental architectonic elements including the interior and exterior elevations, different sections details, architects schedules for fire, connectors, electric panels, plumbing and HVAC and riser diagrams amongst others.

The architect is also very meticulous in understanding and architecturally integrating technical specifications in compliance to architects building codes, while providing in depth information and architect research in response to building department architects comments. At the same time, I have been successful in coordinating the different architect's consultants and/or contractors in getting the best results for our clients and meeting our deadlines.

Additionally, our staff architect's architectural training from the architects graduate program at University of South Florida at Tampa has indeed provided the architect with strong fundamentals of architect and analytical skills while enhancing the architects creativity in architect design. The architects professional work ethics, relentless desire to excel in all architecturally challenging situations and interests in learning and exploring new architect ideas and/or concepts has indeed helped the architect to become a significant architect contributor to any organization or architect project. The architects excellent architect communication skills have always helped the architect tremendously in fulfilling any architect professional goals.
